

# HURRICANE

RIDE ON FLOOR SCRAPER

"Fast, Powerful and  
easy to maneuver"

# Powerful and Unique Features

When hand tools, walk behinds and manual labor isn't getting the project done the Hurricane is the tool of choice by professional surface prep contractors nationwide. The Hurricane is designed to quickly take up a wide variety of coatings and floor coverings including, waterproofing membranes, Carpet, VCT, Ceramic Tile and Hardwood.

The Hurricanes compact design allows it to fit in tight places yet it has the extra weight and horsepower to remove even the toughest of surfaces.

It is also the fastest Ride-On Scraper in its weight class (2800 lbs) with speeds reaching 440 feet per minute. This means that even the largest of removal jobs can be completed in a timely manner.

You will enjoy the Hurricanes simple, yet rugged design. It is overbuilt to handle the most brutal of removal jobs without the costly breakdowns that you see with similar units on the market. Its simplicity makes maintenance easy and repairs straightforward.

## FAST SPEEDS

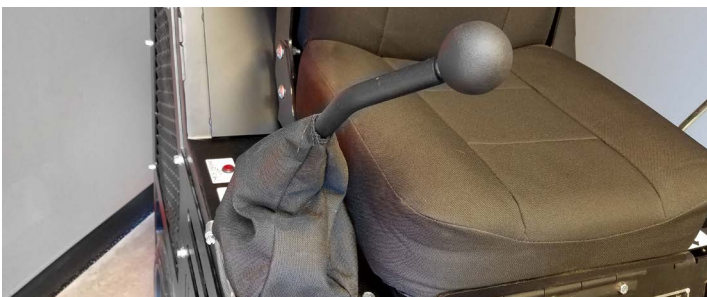

With speeds of up to 440 Feet per minute  
you can remove several thousands of feet of  
flooring per hour.

## SINGLE JOYSTICK CONTROL

The Hydrostatic Joystick control allows you to smoothly steer the floor scraper while it is in motion. This is a vast improvement over the standard two handle skid steer style of control.

You are also able to slowly engage the wheels without any jerky motion which helps to avoid damaging walls and helps keep the blade engaged with the material being removed.

## FLOATING BLADE DESIGN

The floating blade design allows for the blade to stay in constant contact with the floor. It also allows you to lock the blade bar in place for difficult removal jobs.

## THE HURRICANE SPECIFICATIONS

Dimensions	51.5" x 25" x 57"
Machine Weight	2800 lbs
Speed	330 Feet/Minute
Run Time	6-10 Hours
Removable Weight	1500 lbs
